

Catastrophic Origins of The Australian Alps

Introduction

Hello My Name is Glen Collins....

Abstract

By Paraphrasing the Infallible words of god using a modern perspective We learn that the Great flood that god caused to wash away all the sinful humans fell from Above the atmosphere in such amounts that it raised the mean sea level by over 9Km covering the highest mountains within 960 hours.

The intention of this paper is to show that with only the miraculous removal of heat that can be assumed god caused to prevent the ionisation of the earth's surface by the deluge can explain the folding digenesis' and uplift of the strata observed in the Australian Alps (Snowy Mountains)

Description of strata

The Australian Alps Rise from near sea level at there outer bounds to roughly 2200m at Mt Kosciuszko the Rock immediately underling the surface soil is Obviously of marine origin uplifted and folded by the flood.

Scientists who do not trust the divine word Identify this strata as dating from the Cambrian and Devonian periods (Between 540 and 400 million years ago). A time when they say this area was deep ocean floor. These strata are intruded in many places by Granitic rock and overlain by in areas lava which was obviously squeezed from the earth's mantle and heated by differential pressures imposed by spatial variances in the rainfall of the great flood.

This rock has been carved differentially by receding flood waters into undulating hills borded by deeply carved valleys and gorges.

The area also has undergone period of Rapid movements of water while the great flood was still being drained off by god producing steep sided valleys and depositing rocks in neat patterns which some less god-fearing geologists have interpreted as the slow movement and recession of glaciers.

The Mechanism

When the almighty Created the waters to cover the earth he created it so that there were pockets in three dimensions of space containing smaller amounts of water within the waters which were to rain down upon the earth so that when the rains occurred the greatest pressures were around those areas under which these pockets were created. The Force generated by the impact of at least nine kilometres thickness of water over only 40 days could easily push up a ridge of material 2 or more kilometres high even if it can be assumed that god sent it down as a very heavy rain which it would have to be to land so much water in such a short time. It can also be assumed that the rain would impact at a high speed due to the larger size of the individual drops produced and the height of the fall (From the firmament). The land would then necessarily be pushed up into any lower pressure area. It would also be folded and faulted by the rapid changes in pressure. It is recognised that in order for this process to work God would have to rigidly control the temperatures and pressures associated with various areas across the Australian alps but the author feels that the lord may have planned to ensure that the peoples of the area would have the diversity of challenges required to create the culture from which the man from snowy river would spring as well as providing the natural resources required to supply the growth of the industrialised world.

Conclusion

God is great, the flood was a real event, Almost all geologists are lying or intentionally blind to the evidence of biblical creation and catastrophism
